

Construction Electrician **NEW!**

Architecture, HVAC & Construction

Looking for a career where you can work with your hands, solve problems, and power the world around you?

Through hands-on learning and real-world practice, you'll learn how to read blueprints, install and maintain electrical systems, and apply industry safety standards. From wiring homes and buildings to understanding electrical codes, this program covers everything you need to step confidently into the workforce as an entry-level electrician.

Designed with flexibility in mind, this program helps students balance work, life, and education while building a strong foundation in electrical theory and technical skills. Whether you're starting fresh or advancing your current path, the Construction Electrician program at Hennepin Tech prepares you for success in this in-demand, essential career.
